

CS352 Project 1

Team Details

Sharif Haason (ssh128)

Collaboration

I consulted the [Python documentation on the socket library](#).

Step 2 Observation

After running step 2 above, I observed that the communication between server and client executed immediately without wait. This is because the `sleep` function delays the execution of the program.

Idiosyncracies

My code requires Python 3.8.5 to execute.

Difficulties

I got mixed up between the server socket and the socket connection between the client and the socket.

Observations

6. I learned how sending information through the Internet is just writing bytes into a file at the simplest level.
